

# Design More, Sell More, Make More Money!

**THE SKISTIMAS DESIGN SYSTEM,** or SDS™, is a time- and labor-saving system for professional balloon decor.

The system consists of six primary components which were designed to serve as basic templates for creating quick, easy, and safe decor structures. All of the SDS components were designed to be used in conjunction with one another to allow you to create profitable, reusable balloon decor – from precision balloon walls, to elaborate entrances, to custom sculptures.

No intricate balloon techniques are required for using SDS. It's ideal for both novices and experienced decorators alike. All the components are reusable, so the more you use them, the more money you make.

Inside this handout you'll find out how to use each SDS component, as well as actual decor applications. The ideas we've included are versatile and easy to create, and are only the beginning. With SDS you can do so much more. Use the ideas to get your creativity flowing... where SDS will take you next is up to you.

*For more ideas using SDS, refer to Balloon Images magazine.*
